Active Interactive Voice Response Script

Overview

This active interactive voice response (IVR) interview script is provided to assist operators while attempting to reach the patient. The script explains the purpose of the survey and confirms necessary information about the patient before the patient is connected to the IVR system. Operators must not conduct the survey with a proxy.

General Interviewing Conventions and Instructions

- All text that appears in lowercase letters must be read out loud
- Text in UPPERCASE letters must not be read out loud
- All questions and all answer categories must be read exactly as they are worded
- No changes are permitted in the order of the question and answer categories for the core and “About You” HCAHPS questions
- The five “About You” HCAHPS questions must remain together
- All transitional statements must be read
- Text that is underlined must be emphasized
- Characters in < > must not be read
- [Square brackets] are used to show programming instructions that must not actually appear on IVR screens
- Each question must be programmed so that the patient can go to the next question in cases where they do not know the answer or refuse to answer
- Each question must have the option for the respondent to be connected to a live operator at any time during the survey
- MISSING/DON'T KNOW (DK) is a valid response option for each item in the IVR script. This allows the IVR system to go to the next question if a patient is unable to provide a response for a given question (or refuses to provide a response). In the survey file layouts, a value of MISSING/DK is coded as “M - Missing/Don't know.”
- Skip patterns should be programmed into the IVR system.
 - Appropriately skipped questions should be coded as “8 - Not applicable.” For example, if a patient answers “No” to Question 10 of the HCAHPS survey, the program should skip Question 11, and go to Question 12. Question 11 must then be coded as “8 - Not applicable.” Coding may be done automatically by the IVR system or later during data preparation.
 - When a response to a screener question is not obtained, the screener question and any questions in the skip pattern should be coded as “M - Missing/Don't know.” For example, if the patient does not provide an answer to Question 10 of the HCAHPS survey, then the IVR system should be programmed to skip Question 11, and go to Question 12. Question 11 must then be coded as “M - Missing/Don't know.” Coding may be done automatically by the IVR system or later during data preparation.

NOTE: SEE INTERVIEWING GUIDELINES IN APPENDIX I FOR GUIDELINES ON HOW TO HANDLE DIFFICULT TO REACH PATIENTS.
